Comfort You Can Feel Savings You Can See

A Smarter, Greener Home Investment

Upgrading to modern replacement windows is one of the smartest investments a homeowner can make. Today's high-performance windows feature advanced insulation, double or triple-pane glass, and low-emissivity coatings that significantly reduce heat transfer. These innovations help keep your home warmer in the winter and cooler in the summer, reducing the strain on your HVAC system and creating a more comfortable living environment year-round.

Energy Efficiency That Pays for Itself

Replacing outdated or drafty windows can cut your energy costs by up to 25–30%, depending on your home's size and climate. That means your new windows not only pay for themselves over time but also continue saving you money for years to come. With better insulation and tighter seals, you'll notice fewer drafts, more consistent indoor temperatures, and less noise from outside – all while lowering your utility bills month after month.

A Lasting Upgrade for Your Home

New replacement windows are one of the best upgrades you can make for your home's comfort, appearance, and value. They make your house look great, feel great, and even help the environment by using less energy. Whether you're planning to stay for years or thinking about selling down the road, new windows are an investment that truly pays off – in savings, style, and everyday comfort.

Why Homeowners Love The Integrity Series Replacement Windows

If you're thinking about upgrading your windows, Integrity Series windows is one of the smartest choices you can make. Today's vinyl replacement windows combine lasting beauty, energy efficiency, and easy maintenance – all at an affordable price. They're designed to make your home more comfortable, quiet, and efficient while enhancing curb appeal and value.

What to Look for When Choosing Vinyl Replacement Windows

1. Energy Efficiency That Works for You

Vinyl windows are built to save energy – and money. Look for ENERGY STAR® certified models that feature Low-E glass coatings, argon gas insulation, and tightly sealed frames. These features help keep your home warmer in the winter, cooler in the summer.

2. Quality Vinyl Construction

Not all vinyl is the same. Choose windows made from premium virgin vinyl for maximum durability and color retention. High-quality vinyl won't fade, crack, or warp over time. Welded corners and multi-chambered frames add strength and insulation, ensuring your windows look beautiful and perform flawlessly for years with little to no upkeep.

3. Glass and Insulation Options

Your glass choice makes a big difference in comfort and performance. Double or triple pane glass with argon gas fills offers top-notch insulation and sound control. Low-E coatings block harmful UV rays, helping protect furniture and floors from fading while letting in natural light. Some vinyl windows even offer foam-filled frames for an added energy-saving boost.

4. Professional Installation Matters

A great window deserves a great installation. Always go with a certified, experienced installer who ensures a perfect fit and airtight seal. Professional installation prevents leaks and drafts, so your windows can deliver their full energy-saving potential and long-lasting performance.

5. Warranty and Peace of Mind

Look for windows backed by a strong lifetime warranty that covers both materials and workmanship. A solid warranty gives you confidence that your investment is protected and that your windows will perform beautifully for decades to come.

"Built to last, designed to save – that's the Integrity difference."

WINDOW OPTIONS

Picture window also available.

DOUBLE HUNG

Extrusions are fusion welded at every corner to create seamless and strong windows. Top & bottom sash tilt inside for safe cleaning with recessed tilt latches. Double sash locks on windows 26" wide and over. Standard half screen, optional full screen.

SLIDER • 2+3 LITE

Windows operate smoothly with brass rollers. Sash lifts out for safe and easy cleaning inside the home. Standard operable panel screen[s]; 2 lite - half screen | 3 lite - active panel screen[s]. Optional full screen.

AWNING

Handle folds into operator cover of awning. Awning stop air infiltration with triple seal.

CASEMENT

Sash cranks fold into base for a clean look and opens fully with just a few turns. Windows are triple sealed against the weather and can be safely cleaned inside the home. Hinged side of sash slides away from frame when fully opened. Reinforcements in sash provide extra security.

DOUBLE HUNG & SLIDER FEATURES

True sloped sill for positive water drain off, no weep holes to clog. Welded Frame & Sash Corners are solid and free from gaps.

Sash Limit Locks allow secure partial opening. Strong, Extruded Aluminum Screen Frame; standard fiberglass mesh; optional aluminum or pet mesh.

Heavy Duty Sash Lock & Keeper for secure, air tight lock. Continuous Over / Under Interlock & Weather-Stripping prevents air infiltration across entire meeting rail.

AWNING & CASEMENT FEATURES

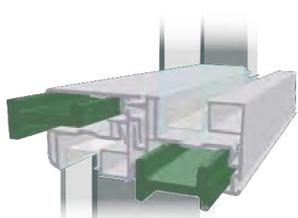

Heavy duty awning mechanism.

Heavy duty casement mechanism.

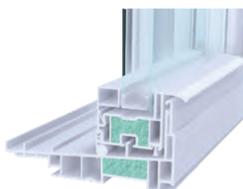

Corner Drive hardware optional.

WINDOW ADD-ON FEATURES

Rigid Thermal Reinforcements are advanced fiberglass reinforced resin inserts, designed to slide easily into window chambers for greater support and insulation.

FOAM FILL INSULATED EXTRUSIONS

Insulating Green Foam Increases energy savings.

Intercept® Stainless

The Strongest Choice.™

Sealant Effectiveness & Gas Retention
The sealant provides the moisture vapor barrier for the I.G. unit. The longer the transmission path, the slower the rate that moisture will travel into the unit through the seal. Stainless Steel is impervious to gas transmission, improving gas retention and maximizing the insulation value of your window over time. Intercept® Stainless offers one of the best transmission paths to maximize window performance.

ENERGY EFFICIENT GLASS

energySMART®glass is standard in every Polaris®window.

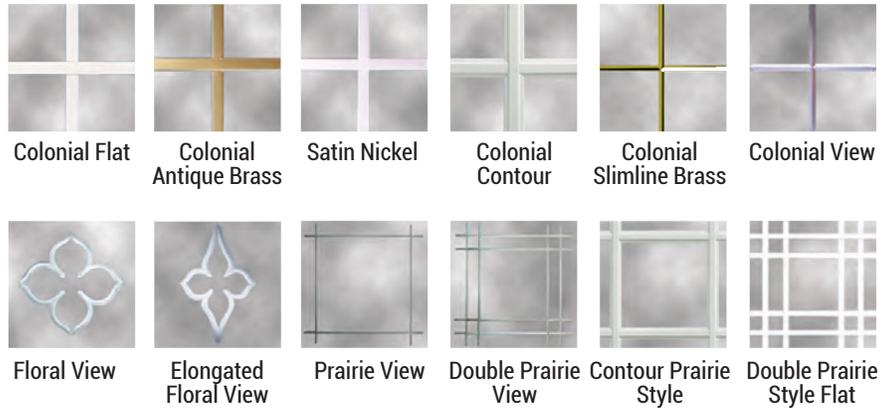

We also offer many high-performance energySMART upgrades. Low-E coating reduces ultra violet light damage and heat gain. Triple pane IG units have sound deadening properties. Argon gas fill between panes further reduces temperature transfer.

Ask about ENERGY STAR qualified upgrades.
